

Pheromones And Increased Attractiveness

Who would have thought that the reason why some men and women attract other women and men more than the rest had something to do with certain chemicals called **pheromones** that our body releases. These chemicals are something that all of us release through our own skin and the larger the amount we release the more **sexually attractive** we appear. The reason being once we release the pheromones they travel undetected through the nose of our 'could be' companion and trigger in their mind a subconscious feeling that translates into increased sexual responses.

This Determines How Attractive You are to Your 'Could be' Partner

Your clothes, cologne and also looks maybe important but they are secondary when compared to these chemicals. This is what explains those off days and nights when absolutely nothing seems to be going right and those other days when you seem to hit a bit of a lean patch. It all has to do with the amount of this chemical you're releasing through your skin.

What It Means for You

Science is very capable of working like miracles, and since that time the function of these **human pheromones** came to light, the obvious question popped up. Can humans control them? Well, the answer is yes. If your body is not releasing a sufficient amount of these chemicals, why not put some of them on. Therefore, the advent of the **pheromone cologne** came to be, or the **pheromone perfume** in the case of women.

These Hybrid Perfumes and Colognes Have Human Pheromones in Their Composition

They themselves do not have any feature or noticeable smell that other people may find out, it just stays on your body like a **secret weapon** urging you on as well as helping you too. If you do not want the particular cologne or perfume these pheromones come along with, you need not worry. You can get hold of just a simple bottle containing these chemicals, which you can mix or apply together with any cologne or perfume. They are different in the case of men who want to **attract women** and women who want to attract men. Some companies have even come out with the option for gay men and lesbian women, if they want to use them too.

Is It for Real

Many people would question the veracity of those chemicals after reading this. If you do too, you would like to know that actual research has gone into this topic to find out the attraction patterns of women and men. Many scientists, not to mention media houses, news channels, magazines and others, possess run their own tests on these pheromones to see whether they actually work. And they do! A person using these chemicals is sure to get more attention and be sexually more attractive than others. It also is seen that people while using the **pheromone spray** or applying it have a more fulfilling sexual life as they are more easily able to attract companions.

- You too can feel the difference, it will give you a whole lot and it is not some fluke advertising luring you in with promises being notices.
- This is genuine science backed up by pharmaceuticals.

You want to consider buying pheromone but are not sure and would like to see and read more, visit www.pherx.com for all the information and buying details.
