

Scents That Attracts

How does the opposite-sex attract you? Is it their eyes? Their smile? Their body? The way they walk? The way they stand? Is it their buttocks? Is their muscle? Is it their boobs? Or can it be because of their smell? Believe it or not, many researchers have pointed out that attraction to the opposite-sex is mainly as a result of their particular smell.

Several managed research suggested that attraction to the opposite-sex is not only because of physical fascination, but mostly because of our own olfactory senses. According to many researchers, human beings are also known to be able to secrete **pheromones** that is similar to what animals mostly use.

“ *What are pheromones? In the animal kingdom, pheromone functions as a form of a social response. Typically in liquid form, animals and insects leave secretions of these chemicals as a way to give information to other animals or perhaps insects of the same species.*

These secretions or perhaps pheromones works in an effort to inform a pet or insect of the same species if the secreting individual is all set for mating or as a territorial sign. In humans, pheromones are mostly known as a form of attraction.

- Few well-controlled scientific studies have have you been published suggesting the possibility of pheromones in humans.
- According to many these types of researchers, pheromones in humans mostly works as a trigger for a chemical reaction to its radio.

Popular case of pheromone use involves the McClintock effect, in which women pheromones tend to be said to result in a special response in other women, such as their menstrual cycles.

“

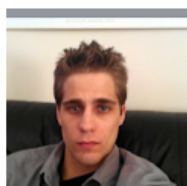

Is There A Use with regard to Pheromones? Now I m not sure if you have ever heard of pheromones but there is such a thing. Pheromones as they exist in nature are chemical activates which are secreted by animals which may result in a change in the behavior of one other animal. These...

Pheromones in the market Nonetheless, pheromones in humans are mostly known in the market as a form of attraction. Products such as **nexus pheromones** are used as a way for human beings to attract the opposite-sex, such as males attracting the females and the other way round.

However, according to many experts studying the effects of nexus pheromones, the effect of this kind of pheromone is not only used to attract a potential partner, such as that in the animal kingdom, but also gives a competitive edge for many people.

Using these kinds of pheromones, other than the nexus pheromones, to attract the opposite-sex can also work in situations in which standing-out from among competition is essential, such as in a job interview.

Work interviews, skills and experience is not the factor that allows an applicant to be able to land in a position. According to suppliers of these kinds of products, a person using specialized **pheromone colognes** can increase a human's attraction to its interviewer, allowing the interviewer to view this candidate differently from others.
