Pheromones have been used as a form of communications between animals since the beginning of time itself. Animals are able to relay information regarding the location of a trail, mark personal territory, repel predators, and gather mates with various smells. These aren't the sorts of odors that can be picked up by the human nose. As an alternative, these chemicals are usually detected with a special organ. The location of the body organ will depend on the animal. With regard to the human male pheromone androstadienone, it is the cortex and hypothalamus in the woman that respond.

Receptors present in the vomeronasal organ of the nose are responsible for detecting pheromones and transmitting the message to the hypothalamus located in the brain. These messages or signals trigger feelings of sexual attraction in the body of both the sexes and if the signals are of strong nature a woman may send a positive response.

Problems With Our Highly Hygienic Lifestyle

In today's world a man who is not clean or sweats on a regular basis is called as an unhygienic person. For this reason men utilize all types of soaps, deodorants and colognes which kill androgen's. This is where the modern pheromones bottles come into play. Many men have right now stopped using deodorants and instead they apply dabs of pheromones on their neck or clothes which help them feel more confident and attractive while nearing a woman.

In women they are emitted when they are becoming fertile while men release all of them as a signal of dominance and optimum sexual health. However, if this is simply not working, then it never hurts to try one of the fragrances with synthetic pheromones added to it to see what the outcome is.
